FOREWORD

The extraordinarily rapid development of aviation and astronautics during the last decade has attracted attention and stimulated scientific investigation by specialists of many fields.

A contributing factor has been the development of new, related scientific fields, among which aerospace medicine and bioastronautics assume an important place.

The continuous growth of scientific publications, the broadening of the general areas of investigation, the inclusion of the great quantity of new specialists, including those in related areas of study--all emphasize the extreme value of obtaining scientific information as the most important instrument in the future progress of science.

The bibliographic index presented here includes the basic scientific publications in the areas of aerospace medicine and bioastronautics published in the USSR from 1962 to 1964.

It is hoped that the publication of this material will aid in the future successful growth of scientific investigation and the strengthening of cooperation between scientists in the spirit of the recommendation of the Subcommittee on exchange of information of the Committee on Bioastronautics of the International Astronautical Federation.

Translated for the National Aeronautics and Space Administration
by John F. Holman and Co. Inc.

NASA-Langley, 1965 F-270

"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."

—NATIONAL AERONAUTICS AND SPACE ACT OF 1958

NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

TECHNICAL REPORTS: Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

TECHNICAL NOTES: Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

TECHNICAL MEMORANDUMS: Information receiving limited distribution because of preliminary data, security classification, or other reasons.

CONTRACTOR REPORTS: Technical information generated in connection with a NASA contract or grant and released under NASA auspices.

TECHNICAL TRANSLATIONS: Information published in a foreign language considered to merit NASA distribution in English.

TECHNICAL REPRINTS: Information derived from NASA activities and initially published in the form of journal articles.

SPECIAL PUBLICATIONS: Information derived from or of value to NASA activities but not necessarily reporting the results of individual NASA-programmed scientific efforts. Publications include conference proceedings, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

Details on the availability of these publications may be obtained from:
